A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 06/24/05 has been entered.

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the specification does not disclose the newly cited feature "transmittance is greater than or equal to 60 percent" of claims 5 and 16.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 4, 5, 8, 9, 13, 15, 16, 19, 20, 25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohta et al (US 6,266,116) in view of Masaki (US 4,653,859).

Amended claims 5 and 16 additionally recite the feature "transmittance is greater than or equal to 60 percent". However, this feature is inherent to the Ohta et al's device because the $d_{\Delta n}$ of Ohta's device is 0.316 μm , as evidenced by the instant specification disclosure, page 9, lines 7-11. Therefore, claims 2, 4, 5, 8, 9, 13, 15, 16,

19, 20, 25 and 26 stand rejected for the same reasons in the Office action mailed 01/25/05.
